SUBS

Smart Unified Backend System

Sovereign-ready, AI-powered unified command & operational intelligence platform.

Unifies surveillance, operational technologies, IoT devices, enterprise applications and field operations into a single command environment — helping operators move from reactive monitoring to proactive command.

OPERATIONAL VALUE

01
Faster incident awareness and response

02
Improved cross-team and cross-agency coordination

03
Higher enforcement and operational efficiency

04
Stronger governance, auditability and compliance readiness

ONE PLATFORM ACROSS

- Traffic operations
- Enforcement
- Emergency response
- Security governance
- Estate management

POWERED BY ATT SYSTEMS

attsystemsgroup.in

PLATFORM OVERVIEW

One platform. Multiple critical operations.

Modern cities, transport networks, critical infrastructure and large estates often rely on disconnected systems. This fragmentation slows response, limits visibility and increases operational risk.

The Smart Unified Backend System (SUBS) is an ATT-owned enterprise backend and operational intelligence platform. It is designed to integrate, orchestrate, and provide analytics and information services in support of core enterprise systems and government operations.

Built on ATT's in-house software engineering capabilities, SUBS combines real-time situational awareness, AI-assisted analytics, workflow automation and digital twin simulation. By correlating inputs from surveillance infrastructure, IoT devices, traffic systems, access control, enterprise platforms and field operations, SUBS delivers a live operational picture across facilities, campuses, transport corridors and city-scale environments.

Why SUBS?

- Unify operations across multiple critical domains
- Improve response with AI-assisted alerts and workflows
- Enhance decisions with real-time operational intelligence
- Ensure resilience through scalable system architecture
- Backed by implementation, SLA and enterprise support

COMPARED WITH FRAGMENTED POINT SOLUTIONS

SUBS PROVIDES	RATHER THAN
A unified command environment	Isolated systems
Cross-domain visibility	Siloed monitoring
AI-assisted operational intelligence	Basic alerting
Flexible integration	Closed ecosystems
Enterprise-scale deployment readiness	Limited-use applications

KEY CORE CAPABILITIES

From live awareness to coordinated action.

Real-time situational awareness

- Unified map-based operational dashboard
- Live visibility across assets and alerts
- Single interface for system oversight

Dynamic emergency management

- Rapid incident triage and escalation
- Coordinated response and evacuation workflows
- Crisis dashboards and lockdown control

AI-assisted operational intelligence

- Anomaly detection and pattern analysis
- Risk identification and early warnings
- Predictive insights for faster response

Mobile field operations

- Mobile tasking and incident access
- Field evidence capture and syncing
- Offline support for remote operations

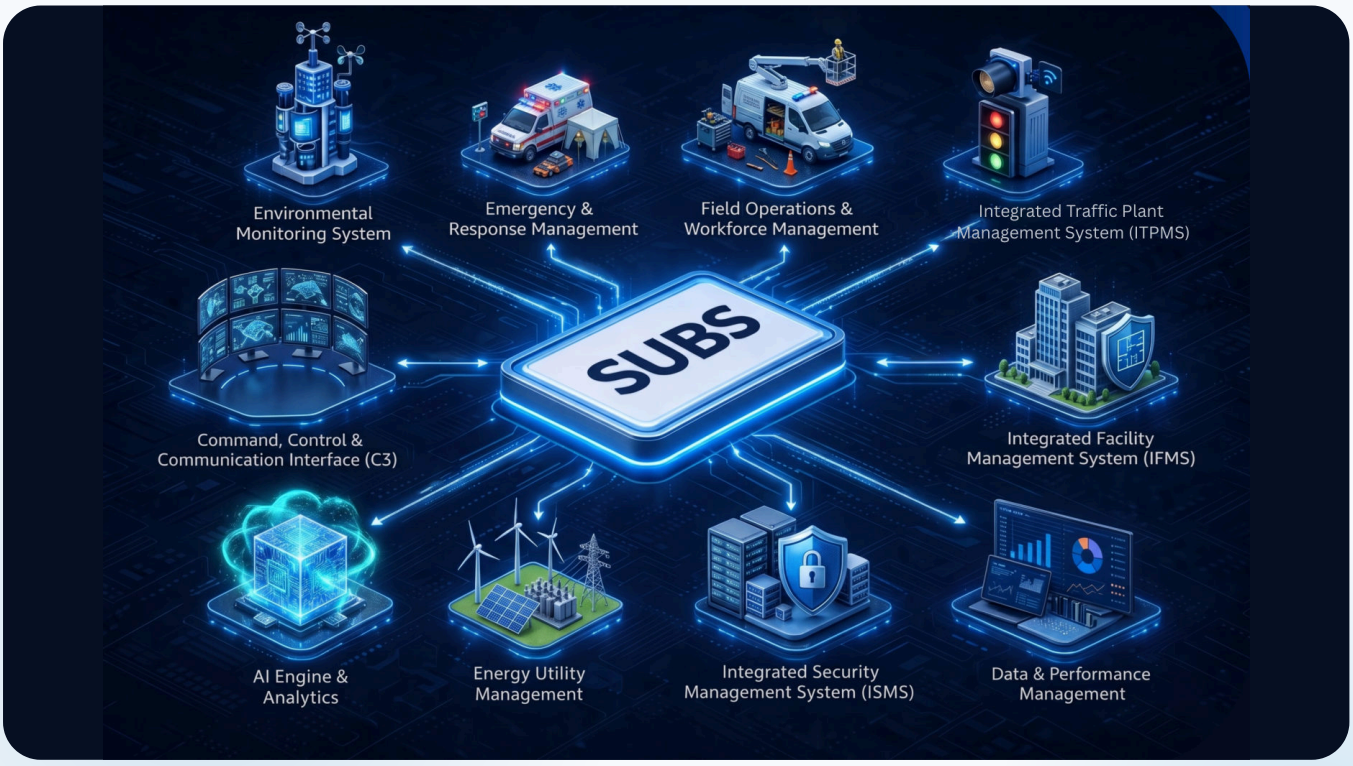

Intelligent enforcement & governance

- Automated violation and exception detection
- Structured evidence with metadata records
- Audit trails for enforcement transparency

Access & security intelligence

- AI-driven access event validation
- Video-linked verification and review
- Mobile credentials and central control

THE CONNECTED SUBS ECOSYSTEM

OPERATIONAL INTELLIGENCE & DIGITAL TWIN

From monitoring to predictive command.

SUBS transforms data into decision-ready intelligence — supporting faster action, better planning and stronger long-term operational resilience.

Decision support & intelligence

- Alert correlation for early event detection
- Dashboards and KPI monitoring for oversight
- Audit-ready reporting and SLA visibility
- Trend and risk analytics for planning
- Access insights for security readiness

Digital twin simulation

- 3D digital twin for operational planning
- Evacuation and crisis rehearsal support
- Infrastructure utilisation analysis
- Scenario testing for preparedness
- Live data improves disruption readiness

Open interoperability

- Integrates with legacy and third-party systems
- Supports modernisation without full replacement
- Enables cross-domain data exchange
- Supports cross-agency operational connectivity

APPLICATIONS ACROSS SECTORS

Government & public safety

- Safe city and transport operations
- Emergency coordination and monitoring
- National infrastructure oversight

Commercial & enterprise operations

- Industrial estates and campuses
- Healthcare and transport environments
- Mixed-use and security operations

Environments needing unified governance

- Centralised visibility across operations
- Controlled workflows and coordination
- Multi-stakeholder operational management
- Secure and accountable governance support

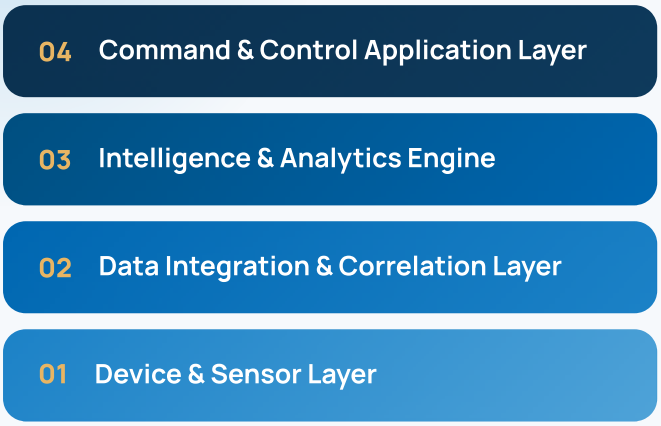

Transforming operations through unified intelligence

Beyond fragmented monitoring · Intelligence-led operations · Command, analytics & simulation combined · Secure, scalable deployment · Clarity, response & resilience

ARCHITECTURE, INTEGRATION & SECURITY

Open. Scalable. Enterprise-ready.

SUBS is architected as a modular, integration-ready platform designed to unify multiple operational layers into a cohesive intelligence environment.

Integration framework

Industry-standard interfaces and secure connectivity:

- REST APIs
- MQTT
- OPC-UA
- Webhooks
- SOAP & other connectors
- Secure API gateway
- Microservices
- Docker / Kubernetes

Enterprise architecture

Designed for high-availability, mission-critical operations through:

- Modular service architecture
- Redundancy, failover and disaster recovery readiness
- Edge-to-core deployment support
- Scalable expansion across single-site, multi-site and large-area environments
- Service resilience aligned with uptime and recovery objectives

Connected system ecosystem

- CCTV and video management systems
- ANPR cameras and radar devices
- Access control and perimeter security
- Fire alarms and public address systems
- Environmental and IoT sensors
- Traffic signal and tunnel control systems
- SCADA and enterprise platforms
- Smart infrastructure (incl. SEMAC, smart meters & sensors)

SECURITY & GOVERNANCE

- Strong encryption for data protection
- Secure communications protocols
- Role-based access control
- Multi-factor authentication support
- Audit logging & forensic traceability
- Time-synchronised evidentiary integrity

DEPLOYMENT, SUPPORT & COMMERCIAL MODEL

Flexible deployment. Trusted operations.

Built for organisations that require deployment flexibility, operational continuity and enterprise-grade service support.

DEPLOYMENT MODELS

- Cloud
- On-premises
- Hybrid
- Edge-integrated
- Multi-tenant configurations

TYPICAL IMPLEMENTATION PHASES

01 Discovery & requirements confirmation

02 Solution design & integration planning

03 Deployment, configuration & system integration

04 Testing, training & user acceptance

05 Go-live, handover & support transition

Each phase is reviewed against agreed deliverables, test outcomes and acceptance criteria, and confirmed jointly by ATT and the customer before moving on. Timelines vary by site scale, number of integrations and deployment model.

SLA & enterprise support

Agreed service levels covering availability targets, incident response priorities and recovery objectives. ATT supports deployments with:

- Implementation and integration services
- Platform configuration and workflow customisation
- Ongoing maintenance and technical support
- Security updates and platform enhancements
- Advisory collaboration for evolving requirements

Commercial model

- Platform licensing
- Annual subscription or support-based models
- Module-based scope packaging
- Integration, deployment and customisation services

Example modules

- Traffic operations
- Surveillance & video operations
- Access control & security governance
- Emergency management & command

Customer readiness

ATT leads solution design, configuration, integration, testing and deployment coordination. Customers typically provide a stable network and power environment (UPS where required), a server room or hosting environment, access to existing systems and data sources, nominated project, IT and operational representatives, and site permissions.

SUBS

Sovereign-ready, AI-powered unified command and operational intelligence platform.

Beyond fragmented monitoring

Intelligence-led operations

Command, analytics & simulation

Secure, scalable deployment
